XX 25, 200X

Dear Ms. Millican:

I recently had the opportunity to review your excellent testimony before the United States Senate Subcommittee on Science, Technology and Space, offered on March 27, 2003. I write with regard to Lupron and its potentially devastating effects this controversial drug had on a developing fetus - now a XX year old XX. Your wealth of knowledge concerning Lupron and your experience with it has prompted me to seek your counsel.

Please allow me to offer a brief summary of the facts and circumstances surrounding my case. My client's mother was treating with her gynecologist for XX. In early XX, 200X, her gynecologist prescribed Lupron, per injection. At the time, she was XX years of age; her last menses was XX. Unfortunately, and unbeknownst to her gynecologist, she was pregnant. A pregnancy test was not performed prior to administration of the Lupron injection. The mother was not made aware of the risks of Lupron until after it was discovered she was pregnant. An early ultrasound of the fetus at XX weeks demonstrated XX and XX deformity of the XX. My client was delivered, XX, at XX weeks with severe XX deformities. At XX years, the child has undergone XX surgical procedures to remediate the XX. XX is confined to XX and exhibits severe functional deficits to XX. In addition, XX XX are underdeveloped, the full extent of which is not presently known.

Subsequent to delivery, both mother and father were genetically tested for XX and other genetic predispositions for birth defects. The tests were negative. It is our fear and our belief that Lupron was the culprit.

It is my hope that you can assist in directing me to professionals who can evaluate the casual connection of Lupron in this case. My toll free number is (800) XX. Thank you for your anticipated cooperation with this most important matter.

Appreciatively yours,

XXXX
